DELIVERY MATCHED INVOICING

PROJECT 09

Pay for what arrived, not for what was invoiced.

A proposed matching workflow that compares supplier invoices with goods received notes and rejection records then drafts credit note requests for a person to approve.

PROPOSED RESEARCH / NOT YET VERIFIED

SYSTEM / RESEARCH ARCHITECTURE

1 STAGE
Invoice intake

→

2 STAGE
Receipt matching

→

3 STAGE
Credit draft

→

4 STAGE
Buyer approval

THE PROBLEM TO SOLVE

How reliably can invoices be matched to what was actually received so rejected goods are credited without wrongly short paying suppliers?

TECHNICAL DISTINCTION

1. The gap is between what was invoiced and what passed temperature and quality checks at the door.
2. No credit note request leaves the business until a named person has approved it.

WHAT THE EVIDENCE MUST SHOW

- ✓ Credit value found vs injected truth on synthetic deliveries
- ✓ Match rate across partial deliveries and substituted lines
- ✓ Wrongly drafted credits that a reviewer would reject
