FORWARD DEPLOYED / PROPERTY / SAFETY CRITICAL

MAINTENANCE TRIAGE

PROJECT 10

Safety reports escalated at once and never delayed.

A proposed triage system for a property manager with about 480 units that classifies and links maintenance reports and escalates gas, fire, flood and safeguarding at once.

PROPOSED RESEARCH / NOT YET VERIFIED

SYSTEM / RESEARCH ARCHITECTURE

1 STAGE
Report intake

→

2 STAGE
Classify and link

→

3 STAGE
Safety escalation

→

4 STAGE
Dispatch owner

THE PROBLEM TO SOLVE

Can a triage system cut routine handling effort while guaranteeing that no safety critical report is delayed or downgraded?

TECHNICAL DISTINCTION

1. The system must fail safe: any doubt about safety means immediate escalation to a person.
2. Classification and deduplication help staff but a person always owns the dispatch decision.

WHAT THE EVIDENCE MUST SHOW

- ✓ Safety report recall with zero tolerated misses on tests
- ✓ Time to escalation under noisy and ambiguous reports
- ✓ Duplicate grouping accuracy and routing correctness
