PLATFORM / ARCHITECTURE / PROVENANCE

COMPANY HUB

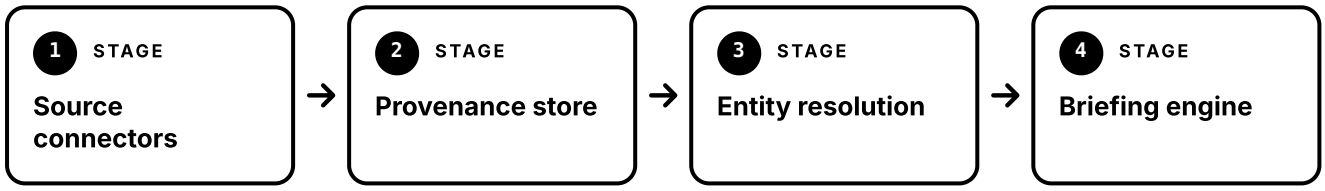

PROJECT 11

Every record traceable to its source and to each other.

A proposed internal intelligence system for a small UK firm that links contracts, meetings, emails and documents so they trace to one another and surface in briefings.

PROPOSED RESEARCH / NOT YET VERIFIED

SYSTEM / RESEARCH ARCHITECTURE

THE PROBLEM TO SOLVE

Can a provenance model that separates verbatim record from derived interpretation keep company knowledge traceable and trustworthy?

TECHNICAL DISTINCTION

1. The value is not search over documents but a record where every claim points back to the exact source it came from.
2. Verbatim record and model interpretation are stored apart so a summary can never silently replace what was actually said.

WHAT THE EVIDENCE MUST SHOW

- ✓ Share of briefing claims that resolve to a source passage
- ✓ Entity resolution precision and recall on synthetic data
- ✓ Tamper detection rate on altered records
